

Software that earns its place.

I'm a software developer who enjoys turning repetitive work into useful applications. Here are four projects and what each one does.

APPLICATIONS

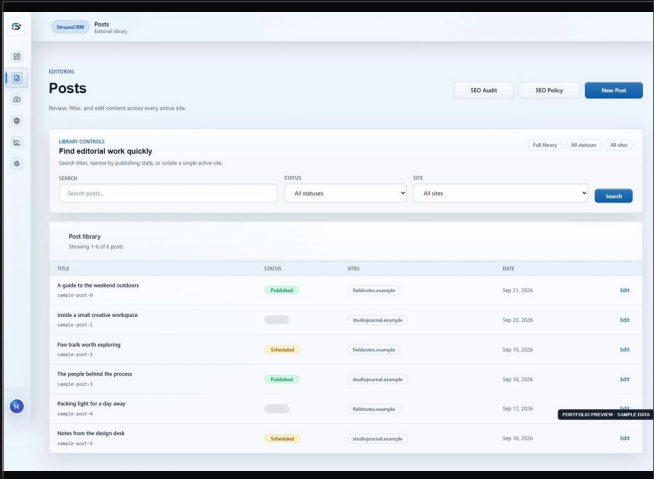

StreamCRM

One workspace. Multiple publishing brands.

WHAT I BUILT

A publishing workspace that brings site-aware editorial work, shared media, and SEO controls together.

Contribution: application development, publishing workflows, and integrations. Preview uses fictional editorial records.

AUTOMATION

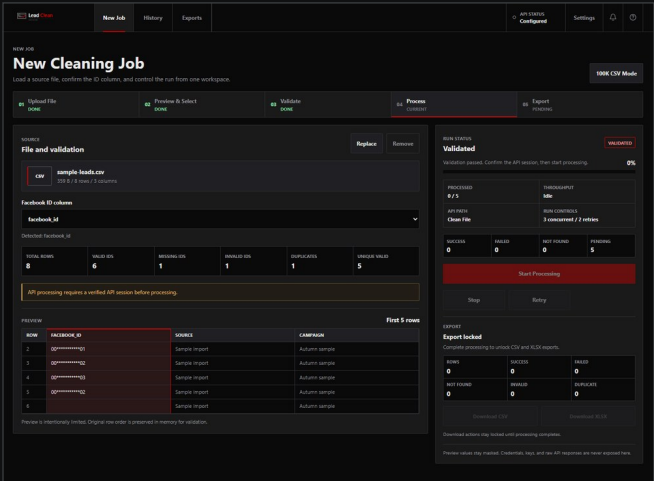

LeadClean

Validate once. Process with control. Export with confidence.

WHAT I BUILT

A Windows tool for validating CSV/XLSX lead files, controlling ID processing, and exporting results while preserving source rows.

Browser example: 8 rows retained, 5 ready IDs, 1 duplicate, 1 missing, 1 invalid. Desktop application is a development preview.

Clear websites. Useful tools.

I build websites that explain a business clearly and tools that reduce repetitive work. Explore the full case studies and screenshots on the portfolio.

WEBSITES

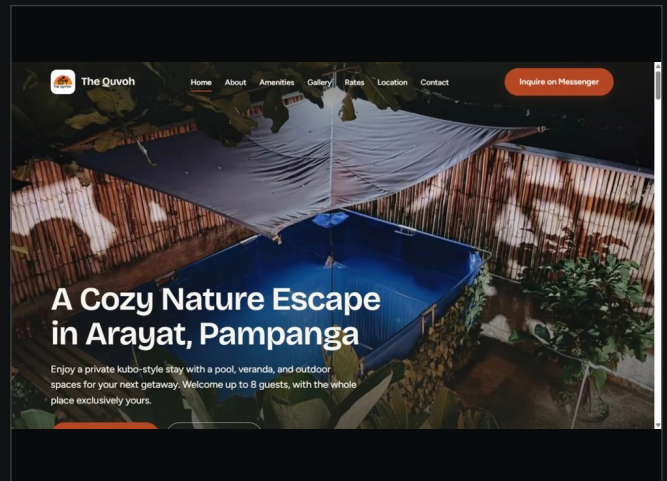

The Quvoh

A private getaway, clearly presented.

WHAT I BUILT

A responsive hospitality website with property photography, stay details, rates, and a form that prepares a guest's inquiry.

Contribution: website development and content organization.
The host confirms availability and bookings directly.

Actual interface · public website

AUTOMATION

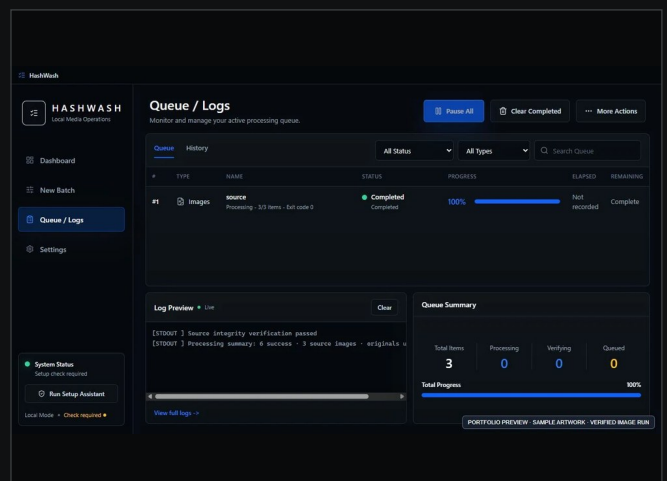

HashWash

Prepare media in batches. Keep the originals.

WHAT I BUILT

A local media workflow connecting batch settings, image and video workers, job monitoring, and output review.

Verified image-worker example: 3 source artworks, 6 exports, all originals unchanged. No speed-at-scale or hardware claim.

Actual interface · sample records / artwork
